REPORT

SUBJECT 1. Proposed Enlargement of Rail

Junction at Szczakowa

SOURCE EVALUATIONS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE

proposed enlargement of the rail junction at Szczakowa (N 50-14, E 19-17) with descriptions and sketches of three types of buildings which may be constructed there. Miscellaneous information on Polish railroad water towers is included with a sketch of a design for a proposed series of new towers.

Entrances were to be either on the side or in the back of the buil	
Several entrances could be built. No entrance was planned for the front of the building. the basement was to contain a central heating p	
the description of the descripti	20/(1
b. Two Sub-Control Dispatch Towers (See Annex B)	
	- 05V4.
these buildings were to be used for control of the yard, and were to be subordinate to the main control tower. These	
buildings were to be identical.	1
The third story of each was to be glassed in on the front and on a	pprox-
mately three-fourths of each side for observation purposes.	
The second story would contain rooms for special unidentified equi	ip-
ment. The first story would contain a supply room for the electrician on duty	
a storage room for carbide lights (signalling lanterns), and toilet facilities (exact location unknown). The basement would contain a central heating unit.	3 <sub>.</sub>
The majority of the windows in these buildings were to be fitted with steel	
shutters as specified by TOPL.	
c. Locomotive Control Building (See Annex C)	
	25X1
This was to be a one-story reinforced concrete build	
The roof was to have a low pitch the walls surrounding rothere and four were to be thicker than the rest (double course of brick with personnel mortar). This was specified by TOPL.	
Room three was to contain the instrument panel which would show the location of the locomotives in the yard.	20
Room four was to have steel shutters fitted into the windows.	
Room six was to have an asphalt floor because batteries were to be stored here.	• '
stored nere.	
Room seven was to be used as billets (only during the winter) by a removal crews.	BROW .
B. MISCELLANEOUS INFORMATION ON POLISH RAILROAD WATER TOWERS	
<del></del>	
	25X1
2.	Ĭ .
the tank at MALKINIA had an estimated 250 cubic meter capacity, and	the
tank at TLUSZCZ was a very old tank of only 100 cubic meter capacity. However the tank at LAPY was of fairly recent construction	<b>?</b> 25X1
1950 it had a capacity of approximately 500 cubic meters.	25X1
this tank sat on an enclosed brick and concrete tower, which had a reunit (coal stove) on the ground floor. The chimney went up through the center	eating '
the tank. This was to prevent the water from freezing during the winter.
